[available at [http://www.ge.ce.nihon-u.ac.jp/~s\\_t/dissertation.pdf](http://www.ge.ce.nihon-u.ac.jp/~s_t/dissertation.pdf)]

My dissertation studies the scope of Quantificational Phrases (QPs) in three different domains and argues for syntactic approaches to the phenomena. Chapter 2 studies a constraint on VP ellipsis, which requires maximization of ellipsis sites in all constructions with a particular syntactic signature. This signature serves to detect various properties of syntactic structures in which the scope of quantifiers is reversed, and confirms the predictions of the syntactic approaches. Chapter 3 defends the copy theory of movement by developing a new theory of counter-cyclic merger, which accounts for facts that, at first sight, seem challenging to a theory that incorporates this mechanism. Chapter 4 investigates the nature of the scope assignment mechanism by examining the fact that the scopal possibilities of comparative QPs (e.g., *more than three books*) are more restricted than other QPs. It demonstrates that this fact is captured by the interplay of the decompositional approach to comparative QPs, and independently motivated constraints on scope assignment.
